## Executive Summary

Since 2002, Kids In Danger (KID) has released an annual report detailing children's product recalls throughout the previous year. This year's report examines children's product recalls in 2011.

Findings of the report include:

- The number of children's product recalls dropped 24% since 2010. The number of recalls for lead has dropped precipitously since the passage and implementation of CPSIA.
- Nursery products were the most-recalled category with 30% of children's recalls, followed by toys at 26%.
- There were 3 recalls of 1 million or more units, down from 11 last year. The largest recalls were for 1.7 million infant monitors that can cause strangulation and 1.7 million toy workbenches and tools that had been involved in near misses when toddlers got the pieces stuck in their throats.
- The most injurious prior to recall this year? Little girl's Keds shoes which had decorative stars that caused 27 reports of lacerations.
- There were 3 deaths reported prior to recall in these products, two strangulations involving a nursery monitor and one entrapment in a bunk bed.
- Three products had more than 100 reports prior to recall including a swing set, remote control helicopter and pogo sticks. The Adventure Playset Swingset had 500 reports.
- Fourteen sleep environment products were recalled, including cribs, a bassinet, a co-sleeper, bunk beds and a canopy bed.
- CPSC imposed a total of \$3.9 million in fines for companies who violated safety regulations, mostly for failing to report choking, poisoning and drawstrings in clothing and one for selling a banned substance.
- Seventy percent of recalling companies offer a full refund, replacement product or merchandise credit, 27% offer a repair kit or replacement parts and three percent offer only new labels or nothing at all.
- Comparing the recall list to reports on SaferProducts.gov shows that there were reports in the public database prior to 11 of the recalls and injuries or incidents with the recalled products were reported for 13 of the recalled products.

It is hoped that the reduction in the number of recalls is a positive sign as manufacturers start to test their products as required by CPSIA. But with the secrecy surrounding the process, that is difficult to ascertain. There are many products on SaferProducts.gov with serious injuries that have not been recalled.

KID urges parents and caregivers to check products carefully against the recall list or reports filed by other consumers at SaferProducts.gov and to make reports if they have an incident with any children's products.

## Introduction

Kids In Danger’s (KID) annual children’s product hazard reports examine data and trends in children’s products that have been recalled by the U.S. Consumer Product Safety Commission (CPSC) each year. This year’s report examines children’s product recalls in 2011.

Congress created the CPSC in 1972 under the Consumer Product Safety Act (CPSA). In the CPSA, Congress directed CPSC to protect the public “against unreasonable risks of injuries associated with consumer products.” CPSC has jurisdiction over more than 15,000 kinds of consumer products, and is charged with protecting consumers from products that pose fire, electrical, chemical, or mechanical hazards or can injure children. In 2008, after record numbers of recalls of lead-tainted toys, hazardous magnetic toys and deadly cribs, Congress passed the Consumer Product Safety Improvement Act (CPSIA). This law requires standards for juvenile products, bans lead and other harmful substances, and mandates independent testing for most children’s products. CPSC is reaching the end of the initial implementation phase of the law, with the exception of standards for additional durable infant and toddler products which continue for a few years. Testing requirements either became effective at the end of last year or will be in place this year as CPSC finalizes the accreditation process for labs.

### 2011: Recalls of children’s products drop

In 2011, there were 310 recalls issued by CPSC, of which 121 or 39% were children’s products. This was a 13% drop overall from 2010 and a 24% drop in children’s product recalls. The number of individual recalled units dropped even more dramatically -- by 75%.

While the secrecy surrounding recalls prior to announcement makes it hard to determine the reason for the drop, it can at least partially be attributed to the impact of CPSIA – recalls of lead-tainted children’s items dropped from 28 in 2009 and 21 in 2010 to only 8 in 2011, a 71% drop in two years. If you go back to 2007, the infamous Year of the Recall, the number of recalls for lead has dropped 93%.

**Table 1: Children’s product recalls 2001-2011**

Year	Total Recalls	Total Children's Product Recalls	% Children's Recalls	Units of Recalled Children's Products
2011	310	121	39%	11,627,576
2010	355	160	45%	44,492,577
2009	346	143	41%	21,124,551
2008	394	190	48%	18,730,715
2007	448	231	52%	46,562,901
2006	318	111	35%	18,967,210
2005	329	123	37%	27,891,188
2004	277	87	31%	156,169,990
2003	214	66	31%	6,140,691
2002	210	90	43%	11,155,631
2001	214	118	55%	22,992,667

### Nursery products top list of recalled products.

Bought for the most vulnerable consumers and hopefully held to a high standard of safety, nursery products nevertheless surpassed other categories in 2011 recalls. Nursery products – cribs, strollers, high chairs and pacifiers for example – accounted for 30% of children’s product recalls and toys for another 26%.

**Table 2: Recalls by product type in 2011**

Type of Recall	# Recalls	% of Children's Recalls	# of Units
<b>Children's Recalls</b>	121	100%	11,627,576
<b>Nursery</b>	36	30%	3,781,015
<b>Toys</b>	32	26%	3,961,370
<b>Clothing</b>	26	21%	496,611
<b>Outdoor &amp; Sports</b>	14	12%	1,364,000
<b>Furniture</b>	6	5%	836,880
<b>Misc</b>	5	4%	1,160,000
<b>Jewelry</b>	2	2%	27,700

### Several manufacturers had multiple product recalls

Fifteen manufacturers reported more than one recall and five manufacturers had three or more. Target, through various private labels and brands, had six different product recalls. Battat, Build-a-Bear, Kiddieland Toys and Phil&Teds each had three separate recalls. Bravo Sports, which had two pogo stick recalls, recorded the most injuries of those with multiple recalls with 14 and Summer Infant which recalled baby monitors twice reported two deaths prior to recall.

**Table 3: Multiple recalls by manufacturer in 2011**

Manufacturer	# Recalls	# Units	Hazards	Injuries
Target	6	923,100	Bodily injury, choking, lead, suffocation, burns	11
Battat	3	1,890,000	Choking	0
Build-A-Bear	3	330,220	Choking, lead, strangulation	0
Kiddieland	3	28,000	Bodily injury	6
Phil&Teds	3	83,560	Bodily injury	8
B.O.B. Trailers	2	411,700	Strangulation, choking	2
Bravo Sports	2	328,000	Bodily injury	14
Bugaboo	2	71,000	Bodily injury	3
Ikea	2	71,000	Bodily injury, entrapment	1
KID O Products	2	2,900	Choking	0
Land of Nod	2	10,000	Burns, entrapment	1
Manhattan Group	2	3,700	Choking	0
Pottery Barn	2	45,000	Burns, Bodily Injury	0
Summer Infant	2	1,758,000	Burns, strangulation	2 deaths

### Recalls of more than one million units decline 73%

Compared to 2010 when there were eleven recalls of 1 million or more units, this year there were three. These three large recalls were for strangulation and choking hazards.

**Table 4: Children’s product recalls over 1 million units in 2010**

Product	Manufacturer	# Injuries	Hazard	# Units
<b>Video Monitors</b>	Summer Infant	2 deaths	Strangulation	1,700,000
<b>Toy tools and workshop</b>	Little Tikes	2 injuries (2 deaths from similar products already recalled)	Choking	1,700,000
<b>Toy keys</b>	Battat	31 incidents	Choking	1,080,000

### Three quarters of recalls came from China, but US second most common country of origin

Children’s products recalled in 2011 originated in 16 different countries, but the vast majority once again came from China. Chinese factories made 89 recalled products, 74% of recalls. The next biggest group of recalls were from the US (9) – 7% of the recalled products were made right here. Vietnam (8) and Taiwan (6) round out the top spots.

### What are the hazards posed by these recalled products?

Children’s products are recalled for hazards ranging from magnet ingestion to entrapment; from strangulation to burns; from mold exposure to choking hazards. For the chart below, KID grouped hazards into broader categories. The total might be higher than 100% because some products pose numerous hazards.

**Table 5: Children’s product recalls by hazard type (2011)**

Hazard	# of Recalls	% of Children's Recalls
<b>Bodily Injury</b>	45	37%
<b>Choking</b>	32	26%
<b>Asphyxia</b>	28	23%
<b>Burn or Fire</b>	14	12%
<b>Lead poisoning</b>	8	7%
<b>Ingestion</b>	3	2%
<b>Mold, skin irritation</b>	2	2%

As mentioned earlier, recalls for violation of federal limits on lead have dropped dramatically even as the acceptable level has been reduced as a result of CPSIA. In addition, recalls for entrapment and suffocation risks from faulty cribs has also dropped, as new tough crib standards came into effect (and many drop-side cribs had already been recalled.)

### What leads to a recall?

Recalls are prompted sometimes from a consumer complaint or injury; sometimes from other reports of hazards and sometimes from the manufacturer’s own review of their product. Here are some of the indicators for recalls.

### Incidents – reports of harm or possible harm from a product

In 2011 there were 1,692 incidents reported prior to recall for the 121 children’s product recalls. While recalls were down 24% overall, incident reports rose 7%. This year, there were three recalls with more than 100 reports. There were 29 injuries associated with those products and no deaths.

**Table 6: Children’s products with most incidents reported before recall (2011)**

Manufacturer	Product	# Incidents	Injuries	Hazards
<b>Adventure Playsets</b>	Swing sets	500	1	Fall
<b>Horizon Hobby, Inc</b>	Remote Control Helicopter	312	12	Bodily Injury
<b>Bravo Sports</b>	2 pogo sticks	205	14	Bodily Injury
<b>AOSOM, LLC</b>	Wooden Playpens	69	0	Choking, Bodily Injury, Entrapment
<b>Dream on Me</b>	Cribs	69	2	Strangulation, Suffocation, Falls

### Injuries - consumers hurt before a product is removed from the marketplace

Injuries from recalled children’s products totaled 163 before these hazardous products were recalled. Thirty-two percent of children’s product recalls involved injuries prior to recall. Seventy-one percent of outdoor and sports equipment recalled had already caused injuries along with 67% of furniture recalls and 42% of nursery product recalls.

**Table 7: Injuries prior to recall by product type**

Type	Recalls	Recalls with Injuries	% of Recalls Involving Injuries	Total Injuries
Children's Recalls	121	37	31%	160
Nursery	36	15	42%	31 + 2 deaths
Toys	32	7	22%	32
Clothing	26	1	4%	27
Outdoor & Sports	14	10	71%	36
Furniture	6	4	67%	25 + 1 death
Misc	5	1	20%	3
Jewelry	2	1	50%	6

Girls’ shoes by Keds with decorative stars that cause lacerations had the most injuries prior to recall – 27. Other products with more than 10 injuries were a remote control helicopter from Horizon Hobby (12) and a canopy bed from Pottery Barn (10).

**Table 8: Products involving the most injuries prior to recall (2011)**

Manufacturer	Product	# of Injuries	Type of Injury
Collective Brands (Keds)	Girls shoes	27	Laceration
Bravo Sports (2 recalls)	Pogo Sticks	14	Bodily Injury
Horizon Hobby	RC Helicopter	12	Bodily Injury
Pottery Barn	Canopy Bed	10	Bodily Injury

### **Deaths – a child dies before the product can be recalled**

Two of the products recalled this year were involved in deaths prior to recall. One, the Summer Infant video baby monitors, was involved in at least two strangulation deaths and the other, a bunk bed, led to the entrapment death of a toddler.

### **Reports of incidents show up in the database both before and after recall**

In comparing the list of recalled products to reports on SaferProducts.gov, eleven of the recalled products had reports made to SaferProducts.gov prior to the recall. It is not possible to tell which of these products were recalled because of the database reports. In addition, thirteen of the recalls had reports on the database after the recall was announced. Four products show up both before and after the recall. A troubling issue is that there are reports on the database of similar incidents with model numbers not recalled. For instance, there were four reports of incidents with the recalled Dorel Asia bunk beds – but an additional 16 reports on other Dorel Asia bunk beds models not cited in the recall.

### **Sleep environment products remain a serious hazard**

In 2011, CPSC recalled 10 infant and toddler sleep environments such as cribs and bassinets and four beds or bunk beds. There were five injuries in the infant sleep environments and 18, including a death, in the beds and bunk beds.

### **Half of recalls provide a full refund as remedy**

In the past, a concern has been that remedies aren't sufficient to encourage participation. This year 60 or 50% offer a full refund. This includes recalls for drawstrings in clothing that can also easily be remedied by simply removing the cord. An additional 14% replaced the product and 6% offered a refund in the form of store or merchandise credit. Some of those sweetened the pot by adding additional dollars or in one case a \$25 gift card. Target, which had the high of six recalls, offered refunds for them all.

Twenty-six percent offered a repair kit or replacement parts, although in a few instances they offered to fix the product themselves. Two percent each either offered only labels and instructions or nothing at all.

**Chart 1: Remedy offered by recalling firm**

**Companies pay penalties in 2011**

The CPSC continued to more aggressively push for civil penalties in cases where companies failed to report incidents or hazards. CPSC collected \$3.9 million in fines for drawstring violations (4), reports of injuries with toy beach chairs, deaths from toy dart gun parts and the infamous Aquadots recall in which a chemical that converted to a ‘date-rape’ drug was included in a children’s art set. In that case, the company was fined both for failure to report and for selling a banned substance.

**Table 9: Fines assessed and collected in 2011 for violations.**

Manufacturer	Product Involved	Amount of fine/ agreed settlement	Violation
Ms. Bubbles	Drawstrings	\$40,000	Failure to report
Macy’s	Drawstrings	\$750,000	Failure to report
CVS	Drawstrings	\$45,000	Failure to report
Sunsations	Drawstrings	\$60,000	Failure to report
Build-A-Bear	Toy Beach Chairs	\$600,000	Failure to report
Spinmaster	Aquadots	\$1,300,000	Failure to report and selling banned substance
Henry Gordy	Dart gun	\$1,100,000	Failure to report

**Conclusion**

It appears that CPSC’s increased efforts and enforcement of product safety laws will lead to fewer recalls, as seen with recalls for lead contamination. In addition, more offers of refunds, rather than repair kits should increase recall participation, as long as the users are aware of the recall.

- To improve recall effectiveness, Congress should call for annual reports on the year's recalls and their effectiveness. Only under public scrutiny will companies put more effort into removing recalled items from homes and childcare facilities.
- CPSC should also require more from companies in the event of a recall. In addition to the mandatory recall requirements and product registration cards required by CPSIA, CPSC should require more aggressive outreach after a recall and require a replacement product or refund when possible, increasing the likelihood of retrieval.
- Given the number of nursery product recalls and the number of injuries involved, CPSC should continue with the mandatory standard rule making. As in the past, most of the recalled nursery products met industry standards.

### Action for Parents and Caregivers

KID urges every parent and caregiver to take the following **three steps to protect children in their care**.

**1) Be aware of the problem:** Visit [www.KidsInDanger.org](http://www.KidsInDanger.org) for more information on children's product safety and to sign up for free email alerts to stay up-to-date on recalled products. Consumers can also sign up at [www.cpsc.gov](http://www.cpsc.gov) to receive notice of recalls by email.

**2) Always check products:** Take an inventory of the products used with children—at home, at childcare, and elsewhere—and check it against the list of recalls at [www.cpsc.gov](http://www.cpsc.gov). Check for safety information on car seats at the National Highway Traffic Safety Administration (NHTSA), [www.nhtsa.gov](http://www.nhtsa.gov). Repeat the check every time a child receives a new product, gift, or hand-me-down. Report any injuries or problems with products at [www.SaferProducts.gov](http://www.SaferProducts.gov).

**3) Spread the word:** After learning of a recall, share the news with friends and family and urge them to pass it along. Always fill out product registration cards so manufacturers can send recall information. Under CPSIA, product registration cards and online registration are required for durable infant and toddler products.

**Become an Advocate:** Let local, state, and national lawmakers know that children's product safety is important. Find out more at [www.KidsInDanger.org](http://www.KidsInDanger.org) advocacy pages.

### Methodology

Kids In Danger obtained all recall information for this report from monthly lists of press releases generated by the CPSC and issued jointly by product manufacturers and the CPSC. Press releases outline the incidents, failures, and injuries caused by the product prior to the date of recall. All numbers, facts, and figures contained in this report originated in these press releases. In addition, SaferProducts.gov was studied for incidents with the recalled products.

Manufacturers have editorial power over the form of the recall release – so it is not certain that these are all the known incidents, just that these were reported. Only children's products under the jurisdiction of the CPSC were considered. This excludes car seats and booster seats regulated by NHTSA. However, CPSC does have oversight of car seats that also function as infant carriers.

## **Definitions**

A children's product is defined as any product designed or intended for the care of or use by children. Products that pose potential dangers to children but that are not intended for their use, such as cigarette lighters with faulty child resistance locks and window blinds, are not counted as children's products. Children's products were further categorized for this report by the type of product (clothing, furniture, nursery products, sports and outdoor, jewelry, miscellaneous, and toys). The product name, manufacturer, date of recall, number of units recalled, type of hazard posed, and number of incidents and injuries were also recorded for children's products recalled in 2011 (Appendix A).

## **About Kids In Danger**

Kids In Danger (KID) is a nonprofit organization dedicated to protecting children by improving children's product safety. KID was founded in 1998 by Linda Ginzel and Boaz Keysar after the death of their 16-month-old son, Danny, in a dangerous portable crib. For more information, call 312.595.0649 or visit [www.KidsInDanger.org](http://www.KidsInDanger.org).

## Appendix: 2011 Children's Product Recalls

Date	Manufacturer	Product	Hazard	Hazard Type	Units Recalled	Incidents	Injuries
<b>Clothing</b>							
1/6/2011	Jean Bourget Inc	Hooded cardigans	Drawstrings	Strangulation	16	0	0
1/11/2011	The Vermont Teddy Bear Co	Hoodie Footie™ Infant & Toddler Pajamas	Metal snaps can come off	Choking	800	0	0
1/11/2011	Mejoong Corp	Children's hooded sweatshirts and jackets	Drawstrings	Strangulation	18000	0	0
1/13/2011	Prairie Mountain Inc	Youth hooded wind/rain jackets	Drawstrings	Strangulation	6200	0	0
1/13/2011	Alpha Industries	Children's Hooded Sweatshirts	Drawstrings	Strangulation	900	0	0
2/9/2011	MIKI HOUSE USA Inc.	Windbreaker Jackets	Drawstrings	Strangulation	10	0	0
2/15/2011	Nurses Choice Corp.	Newborn Keepsake Mittens	Decorations on the mittens can be pulled off	Choking	4700	1	0
3/9/2011	Fun World, Inc.	Little Pet Vet costumes & Dr. Littles costumes	Ear pieces of the stethoscope can be pulled off	Choking	1800	0	0
3/10/2011	Sunsations Inc.	Hooded sweatshirts	Drawstrings	Strangulation	3600	0	0
3/10/2011	Atico International USA Inc.	Holiday rattle baby slippers	Stuffing and rattle inside can be pulled out	Choking	57000	3	0
3/15/2011	Matilda Jane LLC	Girl's Dress	The buttons can come off	Choking	1500	1	0
3/16/2011	Parigi Group, Ltd	Girls' Jeans for Toddlers	Rhinestones & sequins can come off	Choking	1600	0	0
4/7/2011	Fashionviews Inc	P.Jamas children's sleepwear	Fail to meet federal flammability standards	Burn	4000	0	0
4/12/2011	My Michelle	Girl's Tops	Contain high levels of lead.	Lead	90000	0	0
5/3/2011	El Gringo Imports	Girl's Hooded Sweater	Drawstrings	Strangulation	300	0	0
5/11/2011	Meijer Inc.	Bumble Bee & Lady Bug Infant Slipper Socks	The balls at the end of the bug's antennae can detach	Choking	17400	1	0
6/1/2011	Kahn Enterprises LLC	Beeni Baby Hats	A baby can spit up during use	Asphyxiation	35	0	0
