[email@KidsInDanger.org](mailto:email@KidsInDanger.org)

## Executive Summary

Since 2002, Kids In Danger (KID) has released an annual report detailing children's product recalls throughout the previous year. This year's report examines children's product recalls in 2012.

Findings of the report include:

- The number of children's product recalls dropped 20% since 2011. For the first time since 2004, children's product recalls numbered fewer than 100.
- But incidents (up 49%), injuries (up 42%) and deaths (up 200%) reported prior to recall all rose dramatically.
- A third of the recalls (31%) were for nursery products bought to be used with the most vulnerable consumers – infants and toddlers.
- One product, the Flexible Flyer Swing Set, had 1,232 reported incidents before consumers were alerted to the dangers through the recall.
- Eight children and one adult died prior to the recall of these products. This includes five deaths involving the Nap Nanny or Chill Infant Recliners. Other products involved in deaths were crib tents, travel beds, strollers, and an inflatable water slide which killed an adult.
- One of the most deadly products, the Nap Nanny and Chill Infant Recliners by Baby Matters, were not recalled by the manufacturer, but by retailers who stepped up to offer refunds to consumers.
- The number of incidents reported increased by 49% from 2011, with 2,525 incidents reported for children's products.
- Sleep environment products continue to pose a significant hazard, with 7 deaths associated with these products.
- CPSC collected a total of \$3 million in fines for companies who violated safety regulations, mostly for failing to report hazards from products such as drawstrings, baby boats, and magnetic toy sets.

While the reduction in the number of recalls points to stronger standards and mandatory testing having the desired effect, KID is still concerned with the number of injuries and incidents prior to recall. Of particular concern are products for infants and toddlers that are not covered by voluntary or mandatory standards and have led to serious injuries and deaths. In addition, reports on [SaferProducts.gov](http://SaferProducts.gov) show that recalled products continue to injure children and more must be done to get recalled products off store shelves, taken down from internet sales, and out of homes and child care facilities.

KID urges parents and caregivers to check products carefully against the recall list or reports filed by other consumers at [SaferProducts.gov](http://SaferProducts.gov) and to make reports if they have an incident with any children's products.

## Introduction

Kids In Danger's (KID) annual children's product hazard reports examine data and trends in children's products that have been recalled by the U.S. Consumer Product Safety Commission (CPSC) each year. This year's report examines children's product recalls in 2012.

Congress created the CPSC in 1972 under the Consumer Product Safety Act (CPSA). In the CPSA, Congress directed CPSC to protect the public "against unreasonable risks of injuries associated with consumer products." CPSC has jurisdiction over more than 15,000 kinds of consumer products, and is charged with protecting consumers from products that pose fire, electrical, chemical, or mechanical hazards or that can injure children. In 2008, after record numbers of recalls of lead-tainted toys, hazardous magnetic toys and deadly cribs, Congress passed the Consumer Product Safety Improvement Act (CPSIA). This law requires standards for juvenile products, bans lead and other harmful substances, and mandates independent testing for most children's products.

This year, CPSC issued final rules for infant swings, play yards, and portable children's bed rails. They also finalized periodic testing rules for children's products and product registration of infant and toddler durable products. CPSC will eventually have mandatory safety standards for 25 durable infant and toddler products. There are currently eight final rules: cribs, non-full-size cribs, play yards, swings, bed rails, walkers, bath seats, and toddler beds.

## Overview

In 2012, there were 346 recalls issued by CPSC, of which 97 (28%) were children's products. This was a 12% increase in overall recalls from 2011, but a 20% drop in children's product recalls. The last time there were fewer than 100 children's product recalls was 2004 and for the first time since 2001 children's products represented fewer than 30% of all recalls.

**Table 1: Children's product recalls 2002-2012**

Year	Total Recalls	Total Children's Product Recalls	% Children's Recalls	Units of Recalled Children's Products
<b>2012</b>	<b>346</b>	<b>97</b>	<b>28%</b>	<b>13,039,818</b>
2011	310	121	39%	11,627,576
2010	355	160	45%	44,492,577
2009	346	143	41%	21,124,551
2008	394	190	48%	18,730,715
2007	448	231	52%	46,562,901
2006	318	111	35%	18,967,210
2005	329	123	37%	27,891,188
2004	277	87	31%	156,169,990
2003	214	66	31%	6,140,691
2002	210	90	43%	11,155,631
2001	214	118	55%	22,992,667

**Chart 1: Children's product recalls 2001-2012**

Almost three in four recalled children's products were made in China. The recalled products were manufactured in 16 different countries, with 72% made in China. The second-highest total came from the US – but only 8%.

#### **Types of children's products recalled**

Among all the children's product types recalled in 2012, nursery products once again claimed the highest number of recalls. Nursery products – cribs, strollers, high chairs and pacifiers for example – accounted for 31% of children's product recalls in 2012.

Strollers accounted for the largest group (23%) of the nursery product recalls. These strollers posed risk of falls, entrapment, lacerations, and even amputation. High chairs and childproofing devices also made up a significant portion of the nursery recalls. It should be noted that both strollers and high chairs are still in the waiting mode for a mandatory standard and no mandatory standard exists for childproofing products.

The mandatory crib standard adopted in 2010 came after a year of multiple product recalls for dangerous cribs. All cribs sold after June 28, 2011 were required to meet the world's strongest testing standard. Only one crib was recalled in 2012. Chart 2 shows the trend of crib recalls corresponding to the mandatory standard.

**Chart 2: Number of crib recalls, 2007-2012**

It is not only cribs that can pose hazards to sleeping infants. Sleep environments should be of the utmost safety, as children are often left unattended. However, several recalled sleep products pose entrapment, suffocation, and strangulation hazards that can lead to serious injury or death.

Among these recalled products is the Nap Nanny and Chill infant recliner. Children can fall over the side of the product, creating risk of injury and entrapment between the recliner and another item. While the manufacturer -- Baby Matters -- refused to recall the product, retailers did step up and offer to provide relief to consumers who had bought the product. This led CPSC to take legal action to start a mandatory recall proceeding.

Peapod travel beds create a similar entrapment risk, as infants can roll between the mattress and the impermeable tent wall. Finally, the Tots in Mind Crib Tents posed a significant strangulation and entrapment risk, as the clips that secure the tent to the crib can easily break or be removed by the child. All three of these recalled products represent sleep products that are not covered by voluntary or mandatory standards.

**Table 2: Recalls by product type in 2012**

Type of Recall	# Recalls	% of Children's Recalls	# of Units	% of Units
<b>Children's Recalls</b>	97	100%	13,039,818	100%
<b>Nursery</b>	30	31%	9,981,825	76%
<b>Clothing</b>	22	23%	574,870	4%
<b>Outdoor &amp; Sports</b>	18	18%	576,613	4%
<b>Toys</b>	17	18%	325,770	2%
<b>Furniture</b>	6	6%	360,340	3%
<b>Misc</b>	3	3%	1,130,900	9%
<b>Jewelry</b>	1	1%	89,500	1%

While nursery products maintained the top spot for product recalls, clothing came in a close second, accounting for 23% of children's product recalls. Many of these products were recalled due to strangulation hazards posed by drawstrings. Furthermore, seven different products failed to meet the federal flammability standards for children's clothing. Other trends amongst recalled clothing products include detachable snaps or buttons that pose a choking hazard.

Recalled products from the outdoor and sports category featured trampolines, swings, and bicycles, while the toys category included products such as rattles and toys featuring small pieces. Furniture product recalls included beds and chairs. Other products recalled included gel packs, water bottles, and a snap bracelet.

### Multiple products recalled by one company, Recalls over one million

Seven manufacturers reported more than one recall and four manufacturers had three or more. Dream on Me and Dorel Juvenile Group (DJG Inc) each had four separate product recalls. Sportspower Limited and Kolcraft Enterprises Inc. each had three. Meijer, Inc., which had two clothing recalls, reported the most injuries of those with multiple recalls (16).

**Table 3: Multiple recalls by manufacturer in 2012**

Manufacturer	# Recalls	# Units	Hazards	Injuries
Dream On Me	4	51,550	Strangulation, drowning, suffocation	1
DJG Inc.	4	1,865,000	Suffocation, drowning, ingestion	6
Kolcraft Enterprises	3	87,600	Fall, choking, amputation, laceration	6
Sportspower Ltd	3	116,900	Injury, fall	12
Meijer, Inc.	2	208,500	Choking, fall	16
Lee Carter Co.	2	32,000	Lead, choking	0
Cal. Innovations	2	1,128,000	Ingestion	0

Two recalls topped a million units – four million Bumbo baby seats and 2 million Summer Infant baby bathers. Both products had been on the market for years (9 years for the Bumbo seat and 7 years for the bather). Both involved serious injuries including skull fractures. It is not known when the first injuries were reported.

**Table 4: Children's product recalls over 1 million units in 2012**

Product	Manufacturer	# Injuries	Hazard	# Units
<b>Bumbo Baby Seats</b>	Bumbo International Trust	56	Fall	4,000,000
<b>Mother's Touch/Deluxe Baby Bathers</b>	Summer Infant Inc.	5	Fall	2,000,000

### Hazards posed by recalled products

The largest numbers of recalls involve a risk of bodily harm. Falls, lacerations, skull fractures, broken bones and amputations were just some of the hazards that children faced when using these products.

From a high of 109 recalls involving lead or lead paint in 2007, lead related recalls dropped to 4 this year. Lead content can't exceed 100 parts per million (ppm) as of August 2011 and as of February 2009, lead in paint or surface coatings must be less than 90 ppm.

**Table 5: Children's product recalls by hazard type (2012)**

Hazard	# of Recalls	% of Children's Recalls
<b>Bodily Injury/Fall</b>	39	40%
<b>Suffocation/Strangulation</b>	20	20%
<b>Choking</b>	15	15%
<b>Burn or Fire</b>	14	14%
<b>Ingestion</b>	6	6%
<b>Lead poisoning</b>	4	4%
<b>Drowning</b>	2	2%

**Chart 3: Recalls for lead from 2007-2012**

### Incidents reported prior to recall

In 2012 there were 2,525 incidents reported prior to recall for the 97 children's product recalls. While the number of children's product recalls declined by 20%, incident reports increased by 49%. Four recalls involved more than 100 reports, three from the Dorel Juvenile Group (DJG).

With 1,232 reported incidents before the recall was announced, the Flexible Flyer Swing-set from Troxel leads the pack. Without access to information kept secret from the public, it is difficult to understand why this many incidents occurred before action was taken.

Graco and Dorel Juvenile Group (DJG) both manufactured products that had large numbers of incidents reported before recall. With a history of over 20 recalls each, the companies appear to still delay recalls, waiting as the numbers of incidents grow before taking action. Manufacturers should respond more quickly to incident reports to avoid more children being exposed to danger.

Other products with large number of incidents reported before recall include Baby Matters Nap Nanny Infant Recliners and Bumbo Baby Seats. Despite the high number of incidents reported for these products, including 5 deaths associated with the Nap Nanny, both Baby Matters and Bumbo point to lack of supervision or unintended use as the cause. In fact, Baby Matters appeared unwilling to recall their product, leading CPSC to begin legal action to force a recall – thus leaving their retailers to step in and provide relief to consumers. Rather than ignoring incidents, manufacturers should act more quickly to remove products from use.

**Table 6: Children's products with most incidents reported before recall (2012)**

Manufacturer	Product	# Incidents	Injuries	Hazards
<b>Troxel Co.</b>	Flexible Flyer Swingset	1,232	13	Fall
<b>DJG Inc.</b>	Cabinet Locks	278	1	Ingestion
<b>DJG Inc.</b>	Push N' Snap Cabinet Locks	200	3	Ingestion
<b>DJG Inc.</b>	Sure Fit Toilet Locks	110	0	Drowning
<b>Baby Matters, LLC</b>	Nap Nanny & Chill Infant Recliners	92	*	Injury
<b>Bumbo International Trust</b>	Bumbo Baby Seats	78	56	Fall
<b>Graco</b>	Classic Wooden Highchair	58	9	Fall

\*while some of the 92 incidents involved injury, that data has not been released by CPSC or Baby Matters

### Injuries prior to recall

Overall, 38% of children's product recalls involved injuries prior to recall, a total of 232 injuries. Furthermore, over half of both recalled outdoor and sports equipment and recalled nursery products involved injuries. Among recalled children's products, nursery products had the highest number of recalls (18) with injuries.

**Table 7: Injuries prior to recall by product type**

Type	Recalls	Recalls with Injuries	% of Recalls Involving Injuries	Total Injuries
<b>Children's Recalls</b>	97	37	38%	232
<b>Jewelry</b>	1	1	100%	8
<b>Nursery</b>	30	18	60%	129+*
<b>Outdoor &amp; Sports</b>	18	10	56%	86
<b>Furniture</b>	6	1	17%	1
<b>Toys</b>	17	4	24%	5
<b>Clothing</b>	22	2	9%	3
<b>Misc</b>	3	0	0%	0

\*Again some of the 92 incidents with Nap Nanny products involved injuries, but how many was not stated.

Several products caused over 20 injuries, including Bumbo Baby Seats (56), Traveler Recreational Tubes (21), and the Chicco Polly High Chair (21). In addition to the five deaths, the Nap Nanny and Chill Infant Recliners by Baby Matters were involved in over 90 incidents, but it has not been released how many of those resulted in injury.

**Table 8: Products involving the most injuries prior to recall (2012)**

Manufacturer	Product	# of Injuries	Type of Injury
Bumbo International Trust	Bumbo Baby Seats	56	Fall
Tractor Supply Company	Traveler Recreational Tubes	21	Burn
Artsana USA Inc.	Chicco Polly High Chair	21	Laceration
Meijer Inc.	Huffy, Iron Horse, Mongoose, Northwoods, Pacific, Razor & Schwinn bicycles	16	Fall
Landscape Structures Inc.	Slalom Glider Playground Slide	16	Fall
Troxel Co.	Flexible Flyer Swingset	13	Fall
Sportspower Limited	Sportspower BouncePro 14' Trampolines	11	Fall

### Deaths prior to recall

Five of the products recalled this year were involved in deaths prior to recall, an increase from 2011. One product, the Nap Nanny and Chill Infant Recliner, was involved in five infant deaths. These deaths occurred when the baby was able to pull or fall over the side and became entrapped or suffocated by another object. The Peapod travel beds and Tots In Mind crib tent led to one death each due to entrapment and suffocation. The Banzai pool slide led to a fatal injury for a young mother.

**Table 9: Products involving deaths**

Product	# of Deaths	Cause of Death
<b>Nap Nanny/ Chill Infant Recliners</b>	5	Entrapment/suffocation
<b>Peapod/Peapod Plus Travel Beds</b>	1	Undetermined*
<b>Tots in Mind Crib Tents</b>	1	Entrapment
<b>Pliko-P3 and Venezia Model Strollers</b>	1	Strangulation
<b>Banzai Inflatable Pool Slides</b>	1 (adult)	Bodily Injury

\*While the official cause of death was undetermined, the baby's face against the impermeable side wall of the tent and similar incidents involving infants in distress point to possible suffocation.

### Incidents reported at SaferProducts.gov

Among the products recalled in 2012, five separate products featured reports on SaferProducts.gov prior to their recall. While it is unclear which items were recalled due to the

database reports, it is interesting to note that among these products, Bumbo Baby Seats had five reports filed prior to the recall date. Sportspower trampolines had a large number of reports filed both before and after the recall was announced.

There are also reports on SaferProducts.gov citing incidents similar to those that led to recalls, but with model numbers of products not recalled. For instance, the database contains reports of Peg Perego stroller collapses and children falling out of harnesses on a variety of models, but only two models have been recalled to date.

The other consideration is that for the 2,525 reports on incidents in the recall notices, only a tiny fraction of those show up on SaferProducts.gov. This might be because many of the reports date back prior to the initiation of the database. But it also might indicate that even with the public database, consumers still aren't aware of most of the incidents that take place with children's products.

### Penalties assessed by CPSC

CPSC collected \$3 million in fines this year for children's products including drawstrings in clothing (2), baby boats, and magnetic toy sets.

**Table 10: Fines assessed and collected in 2012 for violations.**

Manufacturer	Product Involved	Amount of fine/ agreed settlement	Violation
Burlington Coat Factory	Drawstrings	\$1,500,000	Failure to report
Aqua-Leisure	Baby Boats	\$650,000	Failure to report
The Bon-Ton Stores, Inc	Drawstrings	\$450,000	Failure to report
Battat Inc	Magnetic Toy Sets	\$400,000	Failure to report

### Conclusion

CPSC's increased efforts and enforcement of product safety laws has led to fewer recalls, as seen with recalls for lead and cribs. In addition, a more active CPSC used fines and legal actions for mandatory recalls such as that against Baby Matters and various magnet desk set manufacturers to supplement recalls as a way to increase safety.

- Given the number of nursery product recalls and the number of injuries involved, CPSC should continue with the mandatory standard rule making. As in the past, most of the recalled nursery products met industry standards.
- However, CPSC should also focus on nursery products, especially those that are used for sleeping, that are not currently covered by a standard. Parents assume these products would not be on store shelves unless they had been proven safe – CPSC should make that a reality.

- To improve recall effectiveness, Congress should call for annual reports on the year's recalls and their effectiveness. Only under public scrutiny will companies put more effort into removing recalled items from homes and childcare facilities.
- CPSC should also require more from companies in the event of a recall. In addition to the mandatory recall requirements and product registration cards required by CPSIA, CPSC should require more aggressive outreach after a recall and require a replacement product or refund when possible, increasing the likelihood of retrieval.
- When companies continue to ignore standards and place unsafe products on the market, CPSC should use both fines and administrative actions to force compliance and hold manufacturers accountable for their products.

### Action for Parents and Caregivers

KID urges every parent and caregiver to take the following **three steps to protect children in their care**.

**1) Be aware of the problem:** Visit [www.KidsInDanger.org](http://www.KidsInDanger.org) for more information on children's product safety and to sign up for free email alerts to stay up-to-date on recalled products. Consumers can also sign up at [www.cpsc.gov](http://www.cpsc.gov) to receive notice of recalls by email.

**2) Always check products:** Take an inventory of the products used with children—at home, at childcare, and elsewhere—and check it against the list of recalls at [www.cpsc.gov](http://www.cpsc.gov). Check for safety information on car seats at the National Highway Traffic Safety Administration (NHTSA), by visiting [www.nhtsa.gov](http://www.nhtsa.gov). Repeat the check every time a child receives a new product, gift, or hand-me-down. Consumers can use KID's mobile site, available by going to [KidsInDanger.org](http://KidsInDanger.org) from any mobile device, to search for recalls while away from their computer.

**3) Spread the word:** Report any injuries or problems with products at [www.SaferProducts.gov](http://www.SaferProducts.gov). After learning of a recall, share the news with friends and family and urge them to pass it along. Always fill out product registration cards so manufacturers can send recall information. Under CPSIA, product registration cards and online registration are required for durable infant and toddler products.

**Become an Advocate:** Let local, state, and national lawmakers know that children's product safety is important. Find out more at [www.KidsInDanger.org](http://www.KidsInDanger.org) advocacy pages.

### Methodology

Kids In Danger obtained all recall information for this report from press releases issued jointly by product manufacturers and the CPSC. Press releases outline the incidents, failures, and injuries caused by the product prior to the date of recall. All numbers, facts, and figures contained in this report originated in these press releases. In addition, [SaferProducts.gov](http://SaferProducts.gov) was studied for incidents with the recalled products. Only children's products under the jurisdiction of the CPSC were considered. This excludes car seats and booster seats regulated by NHTSA. However, CPSC does have oversight of car seats that also function as infant carriers.

### Definitions

A children's product is defined as any product designed or intended for the care of or use by children. Products that pose potential dangers to children but that are not intended for their use,

such as cigarette lighters with faulty child resistance locks and window blinds, are not counted as children's products. Children's products were further categorized for this report by the type of product (clothing, furniture, nursery products, sports and outdoor, jewelry, miscellaneous, and toys). The product name, manufacturer, date of recall, number of units recalled, type of hazard posed, and number of incidents and injuries were also recorded for children's products recalled in 2012 (Appendix A).

### **About Kids In Danger**

Kids In Danger (KID) is a nonprofit organization dedicated to protecting children by improving children's product safety. KID was founded in 1998 by Linda Ginzel and Boaz Keysar after the death of their 16-month-old son, Danny, in a dangerous portable crib. For more information, call 312.595.0649 or visit [www.KidsInDanger.org](http://www.KidsInDanger.org).

### **Afterword on Magnets**

Dangerous high-powered magnets were banned in children's products when the ASTM standard on toys became mandatory after the 2008 Consumer Product Safety Improvement Act (CPSIA). Once ingested or inhaled, magnets can create life threatening health conditions and may require surgical removal, made difficult by the small sizes of magnets in toy sets.

But magnet ingestion is still dangerous hazard facing children. While these magnets were removed from toys, many new varieties of adult 'desk sets' popped up – leading to a dramatic increase in injuries. While not included in this report since they were not children's products, CPSC did take action this year. Most manufacturers voluntarily stopped production of high-powered magnet sets, but Maxfield and Oberton Holdings continued production of the popular BuckyBalls, claiming an intended adult audience. Despite the toy's labeling, young children often have easy access to these dangerous products, and they have been the cause of multiple emergency room visits. CPSC started legal action against the company in July of 2012 to see a mandatory recall. CPSC has filed similar actions against Zen magnets and Star Networks.

## Appendix: 2012 Children's Product Recalls

Date	Manufacturer	Product	Hazard	Hazard Type	Units Recalled	Incidents	Injuries	Country of Origin
<b>Clothing</b>								
2/3/2012	Weeplay Kids LLC.	Carter's & Sleep 'n Play Garments	Snaps detach	Choking	128,000	30	0	Bangladesh
